*Winding temperature

Performance data were determined with a thermally decoupled engine and a coolant temperature of 60°C at 6 l/min (water/ethylenglycol 50/50)

In order to run the motor, a frequency inverter capable of conducting **sensorless control** for permanent magnet motors is needed, because the motor has no own position sensor or encoder.

**The rotational direction is defined according to DIN-EN60034-8 (looking on the motor shaft).
